Informations importantes à connaître :

> Les différences de nuances, les fissures, craquelures ou éclats caractérisent les carreaux ciment.
Il est impératif de suivre la méthode de traitement présente dans chaque boite ou consultable sur demande

> Le carreau de ciment étant poreux, il est plutôt réservé à un usage intérieur, sol ou mur.
Très résistant à l'usure, il convient aux pièces à fort passages comme le couloir, où ses motifs géométriques font merveille pour étirer et dynamiser l'espace, ou encore dans le salon, la salle de bains ou la cuisine

> Les carreaux de ciment sont de véritables carreaux composés de matière. Fabriqués de façon manuelle avec un réel savoir-faire, les carreaux de ciment ne peuvent être, encore à ce jour, produits pas des machines.

> Tous nos carreaux de ciment peuvent être fabriqués en 2 épaisseurs : 16mm pour le sol & 12mm pour le mur.
